---

## SUMMARY

I am a front-end developer with the required UI/UX design knowledge. I have a significant focus on the details seeking a perfectly designed user interface with the best possible performance to provide a remarkable user experience.

---

## TECHNICAL SKILLS

**Experienced With =>**

HTML | CSS | Javascript | Typescript | Reactjs | Nextjs | Tailwind CSS | Angularjs

**Familiar With =>** Nodejs | Expressjs | Postgres | MongoDB | RxJS | Supabase

---

## EXPERIENCE

**Freelance** - *Front-End Developer*

2022 - present

I have done various types of projects while working as a freelancer, which include:

- **Management System**

  **Nextjs | Typescript | ChakraUI | Zustand**

  have worked in a Gaming center with a restaurant (buffet) option management system. The system aimed to maintain the management of several branches, which included:

  - The control of the roles and accesses of employees
  - The maintaining of the orders and printing of receipts
  - Managing clients and their balances
  - Maintaining track of time for working devices and calculating the total price.

  Link: https://www.my-controller.online/.

- **Multi-tenancy E-commerce System**

  **Typescript | Nextjs | Supabase**

  I have participated in the development process of a multi-tenancy system that allows the creation of several stores that provide different services. I worked on Nextjs on both the dashboard and the store front end. I gained a lot of experience with databases as the project used Supabase and I had access to database schema

- **Integrating Features**

  **Javascript | Typescript | Nextjs**

  I have integrated the snap-pixel tracking tool in a Nextjs website to track the advertising effectiveness and the activities of users brought by it.

**Webly Tech** - *Front-End Developer*

June 2023 - present

**Angular | Typescript | RxJS | Primeng**

Worked as a front-end developer with the following responsibilities:

- Developing Web Applications with optimized and clean code.
- Guiding team members through the code and job requirements.
- Meeting with the clients, gathering requirements, and reporting to the team.
- Communicating with the backend developer to define API requirements and Reporting Issues.

**Medical Service Dashboard**

**Typescript | Angularjs | RxJS**

I have developed the dashboard of a medical service mobile app. I worked with Angularjs and RxJS to develop the dashboard. I maintained the users' accesses and permissions, local and global filters, etc...

---

## PERSONAL PROJECTS

**ClearMix Clone**

March 2022

**Reactjs | Framer Motion**

A landing page that clones an existing design of the ClearMix website. The page provides a great example of how animation could attract users' attention and highlight the website's services.

Link: https://seifeleslam.github.io/clearmix-clone/.

Repo: https://github.com/SeifEleslam/clearmix-clone.git.

**Complex API Request && UI Page**

Sep 2023

**Reactjs** | **Antd**

These are two small projects that I have done as a step toward applying for a Front-end position. The first task [api-task] was about handling a complex form whose shape changes based on some of its inputs and has a variety of types of inputs. The other task was about developing a provided UI that also included adding some functionality like selecting and searching.

## EDUCATION

**University of the People** - *Bachelor in Computer Science*

Nov 2017 - Dec 2022

**Magna Cum Laude, CGPA 3.83**

I was introduced to many computer science topics like Algorithms, Data Structure, Networking, Machine Learning, Artificial intelligence, and Databases. We have done minor tasks while going through these topics to enhance the understanding of their concepts. I have also enhanced my knowledge of scientific topics that are very useful for computer science like Statistics and Math. One of the excellent skills that I have gained is searching (both scientific searching and causal searching for a problem's solution).

**Beni Suef University** - *Bachelor in Civil Engineering*

Sep 2016 - Oct 2022
